

To the Communities Who Shaped Us and the Leaders Who Shape Our Futures,

We are the next generation of researchers in America, writing this letter because our shared future and that of American scientific progress are at stake. We came to science from different backgrounds and communities across the United States and the world. Some of us were driven to science after watching a loved one battle cancer, determined to develop treatments to save lives. Others are driven by a desire to understand and protect the natural world. Regardless of how we got here, we are united by a spark of curiosity nurtured by our communities. We dream of serving and advancing society by contributing new knowledge, technology, and solutions.

Today, our dreams and contributions, and American science as a whole, are under extraordinary and unprecedented threat. Many scientific research and training grants have been [cancelled](#), scientists in government research and regulatory roles have been [fired](#), and the [language](#) used to discuss science is being policed. In April alone, the National Science Foundation (NSF) [halved](#) the awards supporting students' scientific training. Public science funding is already at its [lowest](#) share since tracking began, and recent budget [proposals](#) would further cut it by half.

This threat is personal for all of us. With each passing day, more of our research grants are being cancelled, more job opportunities are disappearing, and more of us are questioning our scientific future in the United States. We are entering our careers at the most difficult time to be an American scientist in decades. These setbacks have dire implications not just for our futures but for the future of American science: new medicines will not be invented, crops will wither from disease, and innovation will come to a standstill.

Beyond these direct cuts to science, the prevailing atmosphere of censorship in our workplaces hampers our ability to conduct research. International students are being arrested and detained without trial, having their visas arbitrarily revoked, and increasingly prevented from entering the country at all. Scientists now [fear](#) coming to the U.S., whether for conferences or their careers. This is wrong, and it has chilling implications for the future of science.

To underscore what we stand to lose, scientists have published op-eds in newspapers nationwide to share their science and its importance with their communities. We urge you to check your local newspapers or find a story from your area on [this website](#).

We have called this initiative the McClintock Letters, and we are publishing this open letter on June 16th, the birthday of geneticist Dr. Barbara McClintock, the first American woman to earn a solo Nobel Prize for her work in corn genetics. The latest advances in human health and agricultural research, including personalized anti-cancer treatments and disease-resistant crops, all have roots in Dr. McClintock's research. She didn't just study corn—she planted the seeds for the future of medicine and agriculture.

Dr. McClintock also understood the importance of federal funding for science; she contributed to the bipartisan establishment of the NSF. As one of few women in science at

the time, Barbara's legacy not only demonstrates the value of discovery-based research, but also the importance of unique perspectives in science.

Right now, there are thousands of Barbara McClintocks working in labs around the country—young scientists with diverse backgrounds and experiences ready to lay the groundwork for life-saving treatments, innovative technologies, and agricultural solutions that will power humanity for the next 100 years—but they are being deterred at every turn.

We have signed on to this letter because we believe in the future of science, its ability to do good, and what is at stake if we do not act. But we cannot do this alone. Preserving and strengthening American science has always had bipartisan support because it is a cornerstone of our economy and global identity.

We ask you to contact your representatives in Congress. Tell them to sustain public science funding. Share this letter to spread the word in your communities about what we will all lose if the American scientific enterprise is dismantled. Our future as scientists and our future as a country depend on it.

The views expressed here are our own and do not represent those of our affiliate institutions.
